Computer Methods in Applied Mechanics and Engineering 98 (1992) 457–460
North-Holland

Subject index of Volume 98*

Calculus of variations

A unified approach to mixed finite element methods: Application to in-plane problems, S.L. Weissman and R.L. Taylor (1) 127–151

Collocation method

Some spectral approximations for differential equations in unbounded domains, V. Iranzo and A. Falqués (1) 105–126

Control theory

Symbolic modelling of controlled mechanisms, G. Charbonneau, S. Vinarnick, P. Néel, C. Évariste and C. Vibet (1) 23– 40

Coupled problems

Associative coupled thermoplasticity at finite strains: Formulation, numerical analysis and implementation, J.C. Simo and C. Miehe (1) 41–104

Design of programs

Symbolic modelling of controlled mechanisms, G. Charbonneau, S. Vinarnick, P. Néel, C. Évariste and C. Vibet (1) 23– 40
Object-oriented finite element programming: I. Governing principles, T. Zimmermann, Y. Dubois-Pèlerin and P. Bomme (2) 291–303
Object-oriented finite element programming: II. A prototype program in Smalltalk, Y. Dubois-Pèlerin, T. Zimmermann and P. Bomme (3) 361–397

Dynamics

Symbolic modelling of controlled mechanisms, G. Charbonneau, S. Vinarnick, P. Néel, C. Évariste and C. Vibet (1) 23– 40

Elasticity

A unified approach to mixed finite element methods: Application to in-plane problems, S.L. Weissman and R.L. Taylor (1) 127–151

* The issue number is given in front of the page numbers.

Finite difference methods

Conjugate method solutions of the biharmonic equation for the generation of boundary orthogonal grids, P.D. Sparis, A. Karkanis and S. Pergantis (2) 273–290
On the higher-order bounded discretization schemes for finite volume computations of incompressible flows, J. Zhu (3) 345–360

Finite element and matrix methods

A unified approach to mixed finite element methods: Application to in-plane problems, S.L. Weissman and R.L. Taylor (1) 127–151
Constitutive modelling and computation of non-linear viscoelastic solids. Part II: Application to orthotropic PVC-coated fabrics, J. Argyris, I.St. Doltsinis and V.D. da Silva (2) 159–226
A modified hybrid Laplace transform/finite element method for transient heat conduction problems, T.-M. Chen (2) 261–272
Object-oriented finite element programming: I. Governing principles, T. Zimmermann, Y. Dubois-Pèlerin and P. Bomme (2) 291–303
A drill rotation formulation for geometrically exact shells, D.D. Fox and J.C. Simo (3) 329–343
Object-oriented finite element programming: II. A prototype program in Smalltalk, Y. Dubois-Pèlerin, T. Zimmermann and P. Bomme (3) 361–397
Galerkin/least-squares finite element methods for the reduced wave equation with non-reflecting boundary conditions in unbounded domains, I. Harari and T.J.R. Hughes (3) 411–454

Fluid mechanics

Numerical simulation of unsteady transonic flows using a field integral equation method, C.P. Chen and M.J. Sheu (2) 251–260
Pseudospectral calculations of viscoelastic flow in a periodically constricted tube, S. Pilitsis and A.N. Beris (3) 307–328
On the higher-order bounded discretization schemes for finite volume computations of incompressible flows, J. Zhu (3) 345–360

Heat and diffusion

A modified hybrid Laplace transform/finite element method for transient heat conduction problems, T.-M. Chen (2) 261–272

Incompressible and near incompressible media

On the higher-order bounded discretization schemes for finite volume computations of incompressible flows, J. Zhu (3) 345–360

Nonlinear mechanics

Symbolic modelling of controlled mechanisms, G. Charbonneau, S. Vinarnick, P. Néel, C. Évariste and C. Vibet (1) 23– 40
Constitutive modelling and computation of non-linear viscoelastic solids. Part II: Application to orthotropic PVC-coated fabrics, J. Argyris, I.St. Doltsinis and V.D. da Silva (2) 159–226

Numerical solution procedures

Conjugate method solutions of the biharmonic equation for the generation of boundary orthogonal grids, P.D. Sparis, A. Karkanis and S. Pergantis (2) 273–290
A note on the accuracy of stress-point algorithms for anisotropic elastic-plastic solids, B. Loret, F. Hammoum and Y.F. Dafalias (3) 399–409

Optimization

Excavator optimization using the 'voting method', J. Mottl (2) 227–250

Optimization and design of structures

Inverse generation of earthquake-strain constrained designs of a distributed parameter structure for a sequence of design strain functions, T. Nakamura, M. Ohsaki and T. Masui (1) 1– 21
Excavator optimization using the 'voting method', J. Mottl (2) 227–250

Plasticity

Associative coupled thermoplasticity at finite strains: Formulation, numerical analysis and implementation, J.C. Simo and C. Miehe (1) 41–104
A note on the accuracy of stress-point algorithms for anisotropic elastic-plastic solids, B. Loret, F. Hammoum and Y.F. Dafalias (3) 399–409

Problems in physics

Galerkin/least-squares finite element methods for the reduced wave equation with non-reflecting boundary conditions in unbounded domains, I. Harari and T.J.R. Hughes (3) 411–454

Shells and plates

A drill rotation formulation for geometrically exact shells, D.D. Fox and J.C. Simo (3) 329–343

Solution of differential equations

Some spectral approximations for differential equations in unbounded domains, V. Iranzo and A. Falqués (1) 105–126
On the higher-order bounded discretization schemes for finite volume computations of incompressible flows, J. Zhu (3) 345–360

Solutions of ordinary and partial differential equations

Conjugate method solutions of the biharmonic equation for the generation of boundary orthogonal grids, P.D. Sparis, A. Karkanis and S. Pergantis (2) 273–290

Structural mechanics

Constitutive modelling and computation of non-linear viscoelastic solids. Part II: Application to orthotropic PVC-coated fabrics, J. Argyris, I.St. Doltsinis and V.D. da Silva (2) 159–226

Systems of linear and nonlinear simultaneous equations

Symbolic modelling of controlled mechanisms, G. Charbonneau, S. Vinarnick, P. Néel, C. Évariste and C. Vibet (1) 23– 40
Conjugate method solutions of the biharmonic equation for the generation of boundary orthogonal grids, P.D. Sparis, A. Karkanis and S. Pergantis (2) 273–290
On the higher-order bounded discretization schemes for finite volume computations of incompressible flows, J. Zhu (3) 345–360

Thermal effects and thermodynamics

Associative coupled thermoplasticity at finite strains: Formulation, numerical analysis and implementation, J.C. Simo and C. Miehe (1) 41–104

Transonic flow

Numerical simulation of unsteady transonic flows using a field integral equation method, C.P. Chen and M.J. Sheu (2) 251–260

Viscoelastic and viscoplastic media

Constitutive modelling and computation of non-linear viscoelastic solids. Part II: Application to orthotropic PVC-coated fabrics, J. Argyris, I.St. Doltsinis and V.D. da Silva (2) 159–226
Pseudospectral calculations of viscoelastic flow in a periodically constricted tube, S. Pilitsis and A.N. Beris (3) 307–328
